

What happens when
you believe *everything is possible*?

With this tiny device, we can stop a stroke
in its tracks —
without surgery.

“A stroke is like a runaway train in the brain—potentially wiping out speech, mobility and memory with one disastrous event. But, using this small device, we can stop a stroke **while it’s still occurring**, without surgery, and reduce or even reverse the damage.” **Dr. Armond Levy** is a specially-trained neurosurgeon at the SSM Neurosciences Institute whose skills range from sophisticated stroke procedures and brain surgery to complex and minimally invasive spinal surgery. To learn more, go to ssmhealth.com. To find an SSM doctor who’s right for you, call **866.SSM.DOCS**.
