

EMPLOYER HEALTH PROGRAM ROI

Case in Point: Vaccination

- Research shows that Influenza accounts for 39% of all days lost due to illness during flu season.
- On average, an employee ill with influenza will miss up to 5 days of work.
- An employee that earns \$30,000 and misses 5 days of work costs the employer \$580.
- Vaccinating costs less than \$30 per employee.
- Vaccinating an employee prevents them from spreading the flu to co-workers and family members which could potentially add up to additional lost days.
- Bottom line: Over 18 X Return
